SAP NetWeaver Practice

KEY PERSONNEL:

Mr. Bhojraj Maheepathi heads the SAP NetWeaver Practice at Unisoft Solutions Inc.

Mr. Maheepathi has over eight years experience in SAP Middleware technology, including over six years on the webMethods Integration Platform (also known as the SAP Business Connector middleware) and over three years on SAP NetWeaver Process Integration layer (SAP XI/PI).

Mr. Maheepathi was **certified** as SAP NetWeaver XI/PI Development **Consultant** on December 22, 2006.

In addition to providing consulting services, he also designs and conducts customized course content and lab exercises for corporate clients.

PRACTICE AREAS

- IT Staff augmentation in SAP NetWeaver Technologies
- Customized Corporate training/workshops in SAP's latest NetWeaver Technologies
- New Business Development, participating in RFPs, statement of work etc.

Unisoft Solutions Inc is also a member of the America SAP User Group (ASUG) and actively participates in the ASUG Chapters in PA, VA, MD, NJ, NY, CT, MA and OH

CUSTOMER HIGHLIGHTS: COLDWATER CREEK, SANDPOINT, IDAHO

Given below is the course content delivered recently for an on-site instructor-led training in SAP XI/PI at a customer site for sixteen participants.

Our approach during the on-site, instructor-led, hands-on training workshop was to keep the theoretical presentations brief and to do as many exercises as possible. Using a carefully selected list of exercises, we were able to showcase quite a bit of the SAP PI functionality.

A brief introduction on Enterprise Service Oriented Architecture (ESOA), the Enterprise Service Bus (ESB) and the role of SAP NetWeaver and SAP Process Integration in particular was followed by a detailed explanation and demonstration of the procedure for Design, Configuration, Testing and Monitoring of integration scenarios with SAP PI 7.0.

The hands-on exercises demonstrated the following Adapters: SOAP, FILE, HTTP, XI (proxy technology), JDBC, IDOC, RFC.

Other topics covered included import of External definitions (exercise), Message Mapping, Mapping Templates, Adapter framework, File content conversion exercise, (XPATH) exercise to send file to multiple receivers etc. BPM exercises included a BPM exercise, an exercise using RFC to get data from the SAP system, and an exercise using correlation of messages.

Use of ABAP web services as well as selecting different integration technologies for different scenarios was also discussed. New features of PI 7.1 were also highlighted.

Since 2007, we have also been conducting monthly/week-end customized/individualized training/workshops for individuals interested in learning SAP NetWeaver Process Integration Technology (XI/PI) at our office location at Mechanicsburg. Students are also provided 24x7 access to the ECC 6.0 and PI 7.0 systems for education, hands-on-practice and learning
